National Health Expenditure Projections 2006-2016

Forecast Summary

Health care spending in the United States is projected to grow 6.8 percent in 2006, down slightly from the 6.9 percent growth experienced in 2005. This expected growth rate would mark the fourth consecutive year of slowing growth since a peak of 9.1 percent in 2002, and would be the slowest rate of growth observed since 1999. Over the projection period, growth in the expenditures for health care is expected to remain relatively stable, averaging 6.9 percent per year.

As a percentage of Gross Domestic Product (GDP), health care spending is expected to hold steady at 16.0 percent in 2006. By 2016, health care spending in the United States is projected to reach just over $4.1 trillion and comprise 19.6 percent of GDP.

The implementation of Medicare Part D (Part D) in 2006 results in a major shift in the sources of payment for prescription drugs, as spending is transferred from Medicaid and private sources of funding to Medicare. Consequently, expected growth rates for public and private spending in this year's projection are very different. For instance, growth in public personal health care spending in 2006 is projected to climb to 9.9 percent while private personal health care spending growth is expected to slow to just 3.7 percent.

Also attributable to the implementation of Part D, overall out-of-pocket spending growth is expected to slow to 0.5 percent in 2006. Although growth in out-of-pocket spending has historically remained slower than that of private health insurance spending, these growth rates are projected to converge over the next decade. The out-of-pocket share of health care spending, however, is expected to continue to decline from 12.5 percent in 2005, flattening out below 11 percent by 2016.

Prescription drug spending growth is expected to accelerate to 6.5 percent in 2006, primarily driven by increased utilization for certain classes of drugs, such as cardiovascular, central nervous system, endocrine, and diabetes drugs. Any anticipated increase in utilization in 2006 associated with the implementation of Part D is expected to be more than offset by decelerating drug price growth, which is expected to slow to 1.7 percent. From 2007 and onward, Part D is not expected to impact the growth in drug spending, which is projected to average 8.8 percent over this period.

Overall Medicare spending growth is expected to spike at 22.1 percent in 2006, a one-time effect due to the implementation of Part D. In 2007, however, growth is expected to decelerate to 6.5 percent partly due to legislated managed care payment adjustments, and then average 7.6 percent growth for the remainder of the projection.

Combined federal and state Medicaid spending growth is expected to decelerate to 0.1 percent in 2006. Continued cost-containment efforts by the states for most health care services drive this trend, as well as the one-time effect of the shift of drug spending for dual-eligibles from Medicaid to Medicare. These cost-containment efforts are expected

to loosen in 2007, and as a result, growth in Medicaid services is expected to accelerate to 7.3 percent, then average 8.1 percent per year from 2008 through 2016.

Growth in private health insurance premiums is expected to slow for the fourth consecutive year and grow 4.4 percent in 2006. This is down 2.1 percentage points from last year's growth of 6.5 percent. This sharp deceleration largely reflects the impact of the introduction of Part D, as a substantial fraction of retirees drop private supplementary coverage. Excluding the effects of Part D, premiums were projected to edge downwards, to 6.0 percent in 2006. This expectation reflects a low point in the underwriting cycle combined with slowing growth in projected medical benefits per enrollee.

Other major trends:

The growth rates for public and private personal health care spending are expected to converge in 2007, at around 6.5 percent. However, public and private personal health care spending growth rates are expected to diverge over the remainder of the projection, averaging 7.5 percent and 6.4 percent, respectively. The acceleration in public spending is largely driven by faster growth in Medicare enrollment as the leading edge of the baby boom generation becomes eligible for coverage.

Hospital spending growth for 2006 is expected to slow substantially to 6.6 percent. Since hospital spending comprises roughly one-third of health spending, this slowdown is a major driver of the aggregate deceleration in health spending for 2006. Slowing public payer growth is the primary driver of this trend; Medicare spending growth is expected to decelerate to 7.3 percent in 2006 from 8.1 percent in 2005, and Medicaid spending growth is expected to decelerate to 3.5 percent in 2006 from 9.2 percent in 2005. Although average annual Medicare hospital spending growth is expected to remain relatively steady at 7.0 percent for the remainder of the projection, Medicaid hospital spending growth is expected to reaccelerate to an average of 7.1 percent per year over the same period. Private payer spending growth is expected to accelerate slightly to 7.7 percent in 2006 from 7.6 percent in 2005. This acceleration is expected to continue through 2009, where private hospital spending growth is projected to reach 8.4 percent, and then taper to a projection-low of 6.4 percent by 2016.

Physician spending growth is projected to decelerate to 6.1 percent in 2006, driven primarily by a slowdown in price growth. However, physician price growth is expected to rebound from 1.8 percent to 3.1 percent in 2007 and accelerate to 4.5 percent by 2016. In the later years of the forecast (2010 through 2016), physician spending is expected to decelerate in response to slowing utilization and a projected slowing of income growth.

Driven primarily by growth in public spending, home health spending growth is expected to remain swiftest among health service sectors in 2006 at 12.5 percent, following 11.1 percent growth in 2005. While a 10.8 percent increase for Medicare home health services expenditures in 2006 would mark the sixth consecutive year of double digit growth, that trend is expected to moderate and settle to 7.0 percent over the remainder of the forecast period. Growth in home health services provided by Medicaid are expected to grow at a

remarkably strong pace over the forecast, reaching 19.8 percent in 2006 and averaging 9.8 percent from 2007-2016.

Table 1

National Health Expenditures and Selected Economic Indicators, Levels and Annual Percent Change: Calendar Years 2001-2016[1]

[1] The health spending projections were based on the 2005 version of the National Health Expenditures released in January 2007.

[2] 2000 base year. Calculated as the difference between nominal personal health care spending and real personal health care spending. Real personal health care spending is produced by deflating spending on each service type by the appropriate deflator (PPI, CPI, etc.) and adding real spending by service type.

[3] July 1 Census resident based population estimates.

NOTE: Numbers and percents may not add to totals because of rounding.

[1] The health spending projections were based on the 2005 version of the National Health Expenditures (NHE) released in January 2007.

[2] Research and development expenditures of drug companies and other manufacturers and providers of medical equipment and supplies are excluded from research expenditures. These research expenditures are implicitly included in th expenditure class in which the product falls, in that they are covered by the payment received for that product.

NOTE: Numbers may not add to totals because of rounding
