

## **Appendix A. Detailed search strategy**

The following search strategy was used in OVID MEDLINE. In fact, interim searches were performed during the writing of the Technology assessment, because additional questions were added in the meanwhile. The current strategy yields all citations that were identified with the interim searches. The last search was conducted on 28 February 2007.

**Appendix Table 1. Detailed search strategy for OVID MEDLINE**

## **Appendix B. Data extraction forms used in the technology assessment**

The generic data extraction form and the data extraction form for studies that were assessed for errors, data loss, harms and adverse events are shown in the following pages.

## Generic data extraction form

### A. Study description and applicability to Medicare population

Author, Year Country (UI)	N <sub>tot</sub>	Mean age (Range)	~%≥65 yr	Male (%)	Sampling population <sup>A</sup>	Recruitment method <sup>B</sup>	Eligibility criteria

<sup>A</sup> Patients representative of the general population? Patients referred to a specialized center? [However defined] high-risk patients?

<sup>B</sup> Consecutive patients, random sampling, case series/convenience sample

### B. Participant characteristics and baseline “severity/risk”

Author, Year Country (UI)	Mean BMI (Range)	Mean PSG AHI [RDI] (Range)	PSG AHI ≥15 [RDI≥15] (%)	COPD (%)	Symptoms <sup>A</sup> (%)	Comorbidities

<sup>A</sup> Day fatigue and somnolence; or other obstructive-sleep apnea (OSA)-related, as characterized by authors

AHI: Apnea-hypopnea index; PSG: Polysomnography (facility-based); RDI: respiratory distress index

### C. Description of facility-based polysomnography and portable device monitoring (whatever is applicable)

	PSG	PSG	PSG	Portable	Portable	Portable	Portable	Portable
Author, Year Country (UI)	Equipment	Channels <sup>A</sup>	Setting	Type	Name (equipment)	Channels <sup>A</sup>	Setting and timing	Attended

<sup>A</sup> Describe Flow and Effort channels / indicate nd if not described in the study

### D. Interpretation of facility-based polysomnography and portable device monitoring (whatever is applicable)

	PSG	PSG	PSG	PSG	Portable	Portable	Portable	Portable
Author, Year Country (UI)	Scoring <sup>A</sup>	Definition of breathing event <sup>B</sup>	Denominator	Rater experience	Scoring <sup>A</sup>	Definition of breathing event <sup>B</sup>	Denominator	Rater experience

<sup>A</sup> Manual, combined manual and automated, or automated; or other description

<sup>B</sup> Indicate primary criteria and secondary criteria if they exist

**E. Results: [NEW QUESTION] Relationship between baseline measurement of AHI or RDI and CPAP response or compliance.**

Author, Year Country (UI)	Criteria to start CPAP	N <sub>Enrolled</sub>	N <sub>Analyzed</sub>	Outcome	Baseline AHI [RDI] Mean (range)	Baseline for the outcome	Effect size (95% CI or p-value) <sup>A</sup>	Adjustments <sup>B</sup>	Comments

<sup>A</sup> For example, the beta from a linear regression; the OR from a logistic regression; INDICATE THE CHANGE IN THE AHI/RDI THAT CORRESPONDS TO THE EFFECT SIZE

<sup>B</sup> Which adjustments (if any) were used

**F. Results: Concordance [agreement between measurements – assume no gold standard]**

Author, Year Country (UI)	Comparison	N <sub>Enrolled</sub>	N <sub>Analyzed</sub>	Concordance Metric <sup>A</sup>	Value (95% CI or LOA)

<sup>A</sup> Bland Altman plot; Limits of Agreement; NOT correlation coefficients and OLS regression

**G. Results: Diagnostic performances (Portable vs PSG; automated vs manual or combined manual and automated) [assumes gold standard]**

Author, Year Country (UI)	Comparison (Index vs GS)	Index cutoff	Gold standard cutoff	TP: Index(+) & GS(+)	FN: Index(-) & GS(+)	FP: Index(+) & GS(-)	TN: Index(-) & GS(-)	ROC AUC	ROC Q*	Other

**H. Narrative Questions information**

Author, Year Country (UI)	Comparison	Necessity of channels used for Sleep Staging	Necessity of channels used for Airflow Estimation	Errors from unattended use	Errors from automated scoring

**I. Narrative Questions information**

Author, Year Country (UI)	Comparison	Complications and harms	Patient education	Data loss details

**J. Methodologic quality (Assert that the study is prospective and there is no verification bias!)**

Author, Year Country (UI)	Consecutive patients	Blinding to clinical information	Blinding to other test	Random test order or simultaneous testing	Clear description of studied population	Data loss (%)	Quality

## Data extraction form for studies that were assessed for errors, data loss, harms and adverse events

Author, Year Country (UI)	Sleep study (Comparison) <sup>A</sup>	Attended	Hookup	N total	Errors, general	Errors from unattended use	Errors from automated scoring

<sup>A</sup> Just state if the comparators if study is a comparative one; Report details of the channels gathered as in the other form

Author, Year Country (UI)	Sleep study (Comparison) <sup>A</sup>	Attended	Hookup	N total	% Data loss overall	Data loss details <sup>B</sup>	Comment

<sup>A</sup> Just state if the comparators if study is a comparative one; Report details of the channels gathered as in the other form

<sup>B</sup> State in separate lines data loss in laboratory PSG and portable; if given, also in separate lines data loss per channel

Author, Year Country (UI)	Sleep study (Comparison) <sup>A</sup>	Attended	Hookup	N total	% Harms	Harms and complications details <sup>B</sup>	Comment

<sup>A</sup> Just state if the comparators if study is a comparative one; Report details of the channels gathered as in the other form

<sup>B</sup> State in separate lines harms in laboratory PSG and portable, and define them in the details box

REMEMBER:

NO RETROSPECTIVE STUDIES

A STUDY REPORTING NOTHING AT ALL DOES NOT QUALIFY; IF STUDY ASSESSED E.G. FOR ERRORS BUT FOUND NONE, STUDY QUALIFIES

## Appendix C. Table of eligible studies

The following 95 citations have been deemed eligible after full text review. They are listed in alphabetical order (by first author's surname).

**Appendix C Table. Citations of included publications**

## **Appendix E – Information on overall methodological quality grading**

The following appendix tables are provided as a quick description of methodological quality items that were used to characterize the overall methodological quality of the studies. Note that overall study quality may be penalized when improper statistical analyses are used or when data from text, figures and tables do not corroborate. We remind that:

Grade A (good methodological quality) studies fulfill most commonly held concepts of high quality, including the following: blinding of assessors to results of the other test, blinding to clinical information, enrollment of consecutive patients, random order of measurements or simultaneous measurements with the compared methods, clear description of the evaluated population, setting, and measurement methods; appropriate measurement of outcomes; appropriate statistical and analytic methods and reporting; no reporting errors; not excessive data loss (<20%); and no obvious bias.

Grade B (moderate methodological quality) studies may be susceptible to some bias, but not sufficient to invalidate the results. Such studies do not meet the criteria described in category A. They have some deficiencies but none likely to cause major bias. Study may be missing information making assessment of the limitations and potential problems difficult.

Grade C (poor methodological quality) studies are subject to significant bias that may invalidate the results. Such studies may have serious errors in design, analysis or reporting. These studies may have large amounts of missing information or discrepancies in reporting.

**Table E1: Methodological quality items for studies of type I devices**

Author, Year Country (PMID)	Consecutive patients	Blinding to clinical information	Blinding to other test	Random test order or simultaneous testing	Clear description of studied population	Data loss (%)	Quality
