Wisconsin Health and Family Outcomes

Measuring the Performance of Programs in the Department of Health and Family Services, 1998

Introduction

The following document is the product of an effort to routinely report outcome data for programs in the State of Wisconsin's Department of Health and Family Services. This project was initiated by the Secretary of the Department to improve program monitoring and management through the use of performance data. Nineteen programs representing each of the Department's Divisions are included.

The Office of Strategic Finance designed and facilitated the process that staff from each of the programs used to develop the data for this project. The process involved identifying goals, reviewing existing outcome data and developing new data where necessary to measure those goals.

The scorecards are intended to be used as a resource to facilitate the monitoring and discussion of policy and management issues and to inform the budget and strategic planning processes. The scorecards will be updated annually, with some measures on individual scorecards updated more frequently.

Questions about data included on individual scorecards should be directed to the contact person for each program. The contact people are listed on the bottom of each scorecard.

Questions about the scorecard process should be directed to Robert Wagner, Strategic Planning and Evaluation Section, Office of Strategic Finance, 1 W. Wilson, Madison, Wisconsin 53707. His phone number is (608) 266-9296 and his e-mail address is wagnerl@dhfs.state.wi.us
